

**GROWER:** Tim Carter and Neil White

**CROP:** Peanuts

**APPLICATION METHOD:** Mixed with LIFT

**GROWERS COMMENTS:** We put C-CAT on all of our Peanuts and this is the first year we grew peanuts. We averaged 3,450 lbs per acre and this was after 2 major storms came through. We think the C-CAT helped our yield 10 to 15%. One of the biggest benefits we like was mixing the C-CAT with the LIFT. It gave us a better stand of peanuts and was greener and grew faster than the ones that did not get the C-CAT.
