

GROWER: Brittain Farms, Horace Brittain, owner
SUPERVISORS: Tom Brittain and Eddie Green

CROPS: Tomatoes, Egg Plant, Collards and Peppers

RESULTS:

Tomatoes: Sprayed C-CAT before planting. It regularly increased root system; larger and more roots present. The plant itself had more foliage and larger stems.
INCREASED PRODUCTION BY 75%

Egg Plant: Water the C-CAT in at planting and also foliar sprayed periodically. Noticed thicker foliage and healthier plants as in larger stems and thicker root system. **INCREASED YIELD 30% on the low and 70% on the high**
INCREASED PLANT LIFE AND WAS ABLE TO HARVEST LONGER.

Collards: Sprayed before planting and regular foliar sprays. Seen an increase in the root system and new foliage within 2 days and they were more uniform leave size.
HARVESTED IN 32 DAYS, NORMALLY 48 DAYS

Peppers: Sprayed before planting and regular foliar sprays. It increased root system by double, much healthier plants, as in larger stem, more foliage, and less disease problem. Larger production, more uniform size.
INCREASED YIELD BY 30%

GROWERS COMMENTS:

"Personally, if I didn't see it with my own eyes, I would of doubted it. But, I have, and it really works. We tried and experiment 1 acre of Egg Plant Sprayed with C-CAT and 1 acre without.

C-CAT

Larger foliage
 Healthier plants (root system)
 More bloom pods
 Longer plant life
 Increased production 30%

WITH OUT

not as green
 smaller stems, and root system
 less bloom pods

I will without a doubt be using C-CAT from now on."
