

GROWER: RICHARDSON FARMS

LOCATION: MARSTON, MO

CROP: COTTON

YEAR: 2009

APPLICATION METHOD: Foliar sprayed at Pinhead, First Bloom and Peak Bloom.

**FIELDS: 1 AND 2 IRRIGATED
3 NON-IRRIGATED**

RATES: 2 quarts per acre per foliar

RESULT: "In the unusual weather conditions of 2009, C-CAT seemed to stabilize yields, especially in a non-irrigated situation. Since C-CAT is a foliar product, it is a good fit in any fertility program and enhances cotton lint yields with a good return."
