

GROWER: TYLER EFTINK

LOCATION: PORTAGVILLE , MO

CROP: DRYLAND SOYBEANS

APPLICATION METHOD: Foliared at Roundup and at Fungicide

RATES: 3 quarts per acre

RESULTS: “On my soybeans I seen a 5 bushel increase with the C-CAT on verses where I didn’t have it. I also used the C-CAT on my dryland cotton where I picked up about 50 to 60 lbs per acre. I think that C-CAT is a very good product.”
