

LOCATION: Pemiscot County, MO

CROP: Corn

RATE: 1 gal CCat, 1 lbs MMTS

RESULTS: 30 of 80 acres had a single application by airplane in late June. The east side of the field had historically yielded better and the west side had up to an 18" cut. The east side was not treated and the west side was. The east side yielded 155 bu/acre and the west side yielded 145 bus/arce. "I didn't think it would be that close. There was definitely a response." – Grower, who wished to remain anonymous

GROWER: Ramsey Creeks Farm

LOCATION: Cape Girardeau, MO

CROP: Corn/Silage

APPLIED: Full TEVA recommendations

RESULTS: "The recommendations worked. We had 4 silos filled before we even finished chopping. 105 acres filled the first 4 silos this year. It took 133 Acres to fill 4 ½ silos last year." –Charles Schabbing

GROWER: Lorberg Farms

LOCATION: Southeast MO

CROP: Corn

USED: C-CAT, MMTS, 3-18-18 Plant Food Solutions, and TEVA Traces

RESULTS: "The Lord is blessing us with highs in the 240s and averaging probably in the 180s."
