

**LOCATION:** Pemiscot County, MO

**CROP:** Soybeans

**USED:** Plants that were already being treated with C-CAT and other TEVA products were suspect to dicamba damage so an additional foliar application of C-CAT was made 7-11 to see if it could help with any of the damage.

**RESULTS:** Plots that had the extra foliar application had an average pod count of 13.02 higher and an average seed count of 26.94.
